GLOBALREACH GROWTH ENGINE

Standard Operating Procedures & Complete Automation Runbook

System: GlobalReach Growth Engine v1.0 (Full-Stack Automated Acquisition)
Stack: Next.js 14 (Vercel) · FastAPI (Railway) · PostgreSQL 16 · Redis 7 · ARQ Worker · Claude 3.5 Sonnet
Target Audience: Business Owner, Growth Lead, Marketing Operations & SDR Team
Current Safety Default: DRY_RUN=true (Simulated sends until explicit owner flip)
Last Updated: October 2026 · Confidential & Proprietary

Executive Summary & Core Operating Philosophy:
The GlobalReach Growth Engine automates 5 high-impact customer acquisition pipelines: **Cold Email Outreach**, **Multi-Platform Social Publishing**, **Video Content Planning**, **Programmatic SEO & Free Lead Magnets**, and **Launch Hub & Review Ingestion**.
Key Philosophy: *AI Drafts, Human Approves.* The system handles 95% of the mechanical drafting, verifications, metrics rollup, and API packaging. The operator's role is strictly review, quality control, and personal engagement where human trust matters.

1. Operator Time Cadence: When & What to Do

To achieve maximum lead volume with minimum time overhead, follow this structured schedule. The system runs 8 background worker jobs automatically; your manual touchpoints are concentrated into predictable windows.

Frequency	Duration	Module / Screen	Action Items & Guidelines
Daily Morning	10–15 min	Unified Inbox (/admin/inbox)	• Check prospect replies across active campaigns. • Triage positive interest vs objections. • Forward warm leads to calendar / sales call. • Unsubscribes are auto-handled; do NOT re-add.
Daily Afternoon	5 min	Dashboard (/admin/dashboard)	• Verify campaign health: bounce rate MUST stay under 5%. • If a campaign hits >5% bounces, worker auto-pauses it. • Inspect daily attribution pills (SEO, Social, Tools, PH).
Weekly Sunday 18:00	Automated	Background Worker (generate_weekly_batch)	• System automatically generates a full week of draft social posts (X, LinkedIn, Meta) aligned with Brand Profile. • Posts sit in pending_approval status.
Weekly Monday 09:00	20 min	Social Calendar (/admin/calendar)	• Review generated posts for brand voice & relevance. • Edit copy or hashtags if needed. • Click **Approve**. Worker will publish automatically at scheduled times.
Weekly Monday 09:30	20 min	SEO Manager (/admin/seo)	• Inspect newly generated programmatic SEO draft pages. • Check Quality Scores (>85 recommended, min 600 words). • Select a batch of 20–50 verified pages and click **Batch Publish**.
Weekly Wednesday	15 min	Lead Engine (/admin/leads)	• Upload fresh CSV lead batch from Apollo, LinkedIn, or scrapers. • Run email verification job. • Assign verified contacts to active outreach campaigns.

Monthly **1st of Month**	30 min	Launch & Reviews (/admin/launch)	• Dispatch review-request emails to active opted-in users. • Audit cold email domain DNS health (SPF/DKIM/DMARC). • Plan monthly video walkthrough topics in Video Studio.

2. Module-by-Module Operator Guides

2.1 Cold Email Outreach Engine

Purpose: Automate personalized, multi-touch cold email sequences that respect deliverability limits, sending windows, domain health, and legal compliance (CAN-SPAM, GDPR).

Step-by-Step Workflow:

1. **ICP & Brand Profile:** Configure positioning, USP, and value props in /admin/brand. The AI uses this for dynamic personalization.
2. **Sourcing & Importing Leads:** Navigate to /admin/leads. Upload a CSV containing columns: email, first_name, company, industry, city, job_title.
3. **Lead Verification:** Click **Verify Leads**. The system validates: syntax format, MX DNS record presence, disposable email detection, and role-based accounts (info@, sales@). Only valid leads are marked for campaigns.
4. **Sequence Builder:** In /admin/campaigns, create a 3-step sequence. Set step delays (e.g. Step 1: Day 0, Step 2: Day 3, Step 3: Day 7). Use tokens like {{first_name}} and {{company}}.
5. **Sending Windows:** Emails are only dispatched Monday through Friday, 9:00 AM to 5:00 PM in the recipient's timezone.
6. **Unsubscribe Enforcement:** Every email includes an RFC 8058 header and a one-click HMAC-signed unsubscribe link. Clicking it immediately adds the contact to the global SuppressionList and cancels remaining sequence steps.

2.2 Social Content Studio & Publishing

Purpose: Multi-platform content distribution across X, LinkedIn, Instagram, and Facebook without manual copy-pasting.

Step-by-Step Workflow:

1. **Connect Accounts:** Navigate to /admin/settings or /admin/calendar. Authenticate with official OAuth 2.0 apps for X, LinkedIn Company Page, and Meta (Instagram Business + Facebook Page).
2. **Sunday Automated Batch:** The worker triggers generate_weekly_content_batch on Sundays at 18:00 UTC. Claude 3.5 Sonnet creates 7 days of posts customized for each platform's character limits.
3. **Claims Guard Verification:** Every draft passes through claims_guard.py to ensure zero fabricated guarantees, 10x ROI claims, or unverifiable statistics.
4. **UTM Tracking:** Outbound links are automatically wrapped with UTM campaign tags and shortened via /r/{slug} for click attribution.
5. **Approval Queue:** Posts are placed in pending_approval. You review them in /admin/calendar. Only posts marked **Approved** will be published by the publish_due_posts worker job.

2.3 Video Content Studio & YouTube Pipeline

Purpose: Systematize video production for YouTube Shorts, long-form walkthroughs, and social video.

Step-by-Step Workflow:

1. **Keyword Input:** Enter your target search term in /admin/video (e.g. 'B2B lead generation workflow').

2. **AI Script Generation:** The engine generates 5 distinct content angles, followed by a complete 60–90 second script broken down into [Visual Screen Direction], [Spoken Dialogue], and [On-screen Graphic].
3. **Human Recording (Screencast):** Open your screen recording tool (OBS, Loom, QuickTime) at 1080p 60fps. Walk through the GlobalReach UI following the generated stage directions.
4. **Metadata Export:** The system outputs the SEO Title, Description with clickable timestamps, 15 target tags, and a visual Thumbnail Brief.
5. **YouTube Upload:** Push via Google OAuth. The upload is staged as **Private / Unlisted** so you can review playback before making it Public.

2.4 Programmatic SEO Engine & Free Lead Magnets

Purpose: Drive high-intent organic search traffic and capture top-of-funnel leads via automated utility tools.

Programmatic SEO Workflow:

1. **Template Types:** Three seeded templates in /admin/seo: 1) *Find {industry} Leads in {city}*, 2) *Best {competitor} Alternative for {niche}*, and 3) *Lead Generation for {use_case}*.
2. **Variable Generation:** Enter variable combinations (e.g. Industry = FinTech, City = Austin; Competitor = Apollo.io, Niche = Agencies) or upload a CSV.
3. **AI Content & Quality Gate:** Claude 3.5 Sonnet generates intro, 5–7 deep sections, factual comparison tables, and FAQ schema data. The **Quality Gate** strictly rejects pages under 600 words, similarity > 70%, or failing claims_guard.
4. **Weekly Batch Publish:** The owner approves batches of 20–50 pages in /admin/seo. Worker job seo_publish_batch publishes them to public ISR routes with 24-hour revalidation.
5. **Sitemaps & Structured Data:** Public pages are automatically indexed into /sitemap.xml with valid FAQPage, SoftwareApplication, and BreadcrumbList JSON-LD schema.

Free Lead-Magnet Tools Operation:

- **Cold Email Subject Line Grader (/tools/subject-line-grader):** Scores subject lines 0–100 based on length, spam triggers, personalization, curiosity, and clarity, returning 3 AI rewrites. Rate limited by IP.
- **Free Email Verifier (/tools/email-verifier):** Verifies up to 5 emails/day per IP anonymously. Prompts user with an email-capture modal to unlock unlimited/bulk verifications, logging leads to tool_usages.
- **Conversion Funnel:** Both tools feature a persistent sticky CTA linking directly to getyourclientsb2b.com/signup with pre-tagged UTM attribution.

2.5 Launch Hub & Customer Review Ingestion

Purpose: Coordinate multi-channel product launches and harvest authentic customer testimonials.

Step-by-Step Workflow:

1. **Kanban Launch Tasks:** In /admin/launch, track pre-seeded launch checklists for Product Hunt, G2, Capterra, Reddit, and IndieHackers.
2. **AI Asset Generation:** Click **Generate Assets** on any platform card. System drafts Product Hunt taglines, maker comments, and 2-week launch day schedules.
3. **Community Rules Compliance:** Reddit drafts (r/SaaS, r/Entrepreneur, r/SideProject) focus on authentic technical build-journeys with **zero link dropping** to adhere strictly to moderation guidelines.
4. **IndieHackers Milestones:** Drafts real milestone posts pulling verified numbers from the analytics database.
5. **Review Requests:** Trigger review emails (direct G2/Capterra rating links) only to active, opted-in platform users via POST /reviews/request.

3. Safety Protocols & Built-in Guardrails

The Growth Engine is engineered with failsafes to protect sender domain reputation and platform API accounts:

Guardrail	Mechanism	Threshold / Action	Operator Responsibility

DRY_RUN Mode	dry_run_guard decorator across all outbound actions	Default DRY_RUN=true. Outbound emails & posts are simulated and logged.	Keep enabled during testing; flip to false only after domain warmup.
Campaign Bounce Circuit Breaker	check_campaign_health worker job (every 15 min)	If campaign bounce rate exceeds **5%**, campaign is auto-paused immediately.	Investigate lead source quality before resuming paused campaign.
Daily Sending Limits	Mailbox rate limiter & ramp schedule	Week 1: 15/day Week 2: 30/day Week 3+: 50/day max per mailbox	Never bypass daily sending caps on fresh or warmed domains.
Claims Guard Filter	claims_guard.py deterministic regex audit	Blocks banned claims: 'guaranteed', '10x results', fake statistics.	Ensure brand voice prompts stick to verifiable product capabilities.
SEO Quality Gate	quality_gate.py content analyzer	Rejects pages <600 words, >70% similarity, or missing local niche data.	Do not attempt to mass-index thin programmatic doorway pages.
Token Encryption	Fernet symmetric encryption at rest	All OAuth tokens encrypted using ENCRYPTION_KEY in DB.	Safeguard ENCRYPTION_KEY in Railway environment variables.

4. Runbook: Safely Turning Off DRY_RUN (Going Live)

Follow this rigorous checklist before switching from simulation to live email dispatches and social posts:

Phase 1: Pre-Flight Infrastructure Checklist

- **Dedicated Domain:** Never use your root domain (getyourclientsb2b.com) for cold email. Provision a dedicated sending domain (e.g. mail-getyourclientsb2b.com).
- **DNS Authentication:** Verify 4 records: SPF (v=spf1 ...), DKIM (2048-bit key), DMARC (p=quarantine or p=reject), and MX records.
- **Mailbox Warmup:** Run an automated warmup service on all sending mailboxes for a minimum of **14 to 21 consecutive days** prior to cold outreach.
- **OAuth Approvals:** Verify connected accounts in /admin/settings. Confirm LinkedIn Organization Page permissions and Meta App Review status.
- **Unsubscribe Test:** Send a test email to your personal account. Click the unsubscribe link and verify that your email appears in /admin/campaigns under Suppression List.

Phase 2: Changing Environment Variables in Railway

1. Log in to your **Railway Dashboard**.
2. Select your **API Service** > **Variables** > Change DRY_RUN=false.
3. Select your **Worker Service** > **Variables** > Change DRY_RUN=false.
4. Trigger a service redeploy. The worker logs will confirm: ARQ worker started. dry_run=False.

Phase 3: Emergency Rollback (Killswitch)

If abnormal bounce rates (>3%), spam complaints, or platform API warnings occur at any time:
1. Instantly update Railway variable back to DRY_RUN=true on both API and Worker services.
2. Navigate to /admin/campaigns and click **Pause All**.
3. Outbound transmissions immediately halt and revert to benign dry-run logs in the database.

5. Environment Variables & Quick Reference

Reference list of key configuration parameters in backend/.env and Railway:

Variable Name	Sample / Default Value	Purpose & Description
DRY_RUN	true (Default)	Global safety switch. Set to false only when live.
DATABASE_URL	postgresql+asyncpg://...	PostgreSQL connection string (Railway managed).
REDIS_URL	redis://localhost:6379	Redis broker URL for ARQ job queue and rate limiting.
ANTHROPIC_API_KEY	sk-ant-...	Claude 3.5 Sonnet API key for SEO, emails, social, and tools.
JWT_SECRET	*Generated 64-char string*	Signs admin session tokens (HS256).
ENCRYPTION_KEY	*Fernet 32-byte urlsafe key*	Encrypts OAuth access and refresh tokens at rest.
UNSUBSCRIBE_SECRET	*Generated 32-char string*	HMAC signing secret for tamper-proof 1-click unsubscribe links.
SIGNUP_WEBHOOK_SECRET	*Generated 32-char string*	HMAC signature verification for main product signup webhooks.
SENTRY_DSN	https://...@sentry.io/...	Error tracking and APM performance monitoring for API & Worker.

6. Operator Quick-Start Checklist

Every Morning (5 mins): Open /admin/inbox. If an interested prospect replied, respond personally to schedule a demo. Check /admin/dashboard to verify all campaign bounce rates are <5%.

Every Monday (15 mins): Open /admin/calendar. Review the AI-generated social posts for the week, make any minor edits, and click **Approve**. Open /admin/seo and batch publish 20–50 verified SEO pages.

Every Month (30 mins): Run the DNS health check on your cold email domain, trigger review requests in /admin/launch, and plan new video walkthrough screencasts.

Remember: The engine handles the heavy lifting, data enrichment, and scheduling. Your role is human oversight, brand curation, and closing high-value deals.
